

Project Executable Files

Date	30 June 2026
Team ID	
Project Name	Credit Card Approval
Maximum Marks	3 Marks

This section contains all the executable and deployable files required for the **Smart Credit Card Approval System**. The files are organized and documented so that evaluators can easily run, test, or deploy the application by following the provided instructions.

Step 1: Submission Checklist

#	Item to Submit	Submitted
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example)	Yes
6	Deployed application URL (if hosted)	NA (Presented locally)
7	Executable/Application Package (if applicable)	NA (Web dashboard)
8	Dockerfile / Containerization Configuration	NA
9	Test files and test results	Yes
10	Demo video or walkthrough	Yes

Step 2: File / Folder Structure

/project-root

/Flask

- |— app.py
- |— init_db.py
- |— models.py
- |— routes.py

/Training

- |— train.py
- |— credit_card_model.pkl

/static

- |— css
- |— js
- |— images

/templates

- |— index.html
- |— login.html
- |— dashboard.html
- |— prediction.html

/tests

- |— test_api.py
- |— test_model.py

/database

- |— schema.sql

README.md

requirements.txt

.env.example

Step 3: Deployment / Access Details

Hosted / Deployed URL	NA (presented locally)
Login Credentials (Demo)	Username: test, Password: test
Platform / Hosting Provider	Local host

Repository Link <https://github.com/telugugnanesh/Credit-Card-Approval-Prediction>

Demo https://drive.google.com/file/d/1Eo1NnhArulVih5Ay_AAoy0-KiNuJmXl1/view?usp=drive_link

Step 4: Run Instructions Prerequisites •

Python 3.10+ • pip

Installation Steps

1. Clone the repository git clone

<https://github.com/your-username/Smart-Credit-Card-Approval-System>

2. Install dependencies pip install -r requirements.txt

3. Initialize the database python Flask/init_db.py

4. Train the Machine Learning model python Training/train.py

5. Start the Flask application python Flask/app.py

**6. Open the application
<http://127.0.0.1:5000>**

Step 5: Known Issues / Limitations

#	Known Issue / Limitation	Workaround / Status
1	SQLite database supports limited concurrent writes.	Suitable for local deployment and testing.
2	Pickle model depends on Python version compatibility.	Use Python 3.10+ as specified.
3	Prediction accuracy depends on training data quality.	Retrain periodically using updated datasets.
4	High traffic may increase response time.	Deploy with load balancing and production database.
